Current user base Community size and project advantages

Project advantages ;

200,000 holders already

Revenue from Potato Land NFT and Liquidity token game and bridge ecosystem reflections for larger investors holding more than 10% of the project token

Profit from Revenue is the difference between the investors token price and the future market price that the token sells for on centralised exchange

The Projects three token locked Liquidity model encourages high volume of trading which should generate millions a day in trading volume managed by a experienced Liquidity management team that will generate enough daily trading profits to cover easily all of the companies roadmapped costs

Investor owns the projects entire circulating supply

Project eco system sells the investors tokens for a return of at least x2 his investment or after 3 months investor can liquidate his remaining holding for at least the same value as he invested

Managed by smart contract

Team renounces ownership of the smart contract managing the investors Liquidity to the investor

Transparent market making policy

Cooperative market making team

Full access to market makers centralised exchange Liquidity management account
